3.INFORMATION:

Nutrition panels provide information on the average amount of energy (in kilojoules or both in kilojoules and kilocalories), protein, fat, saturated fat, carbohydrate, sugars and sodium (a component of salt) in the food, as well as any other nutrient or biologically active substance claim that requires nutrition information. For example, if a food had a 'good source of fibre' claim then the amount of fibre in the food must be shown in the nutrition information panel.

The nutrition information panel must be presented in a standard format which shows the average amount per serve and per 100g (or 100mL if liquid) of the food. the number of servings of the food, where the weight or volume of the packaged foods is variable, the number of servings of the food per kg, or other units as appropriate.

The word 'slice', 'pack', or 'package' may replace the term 'serving'. For example, one slice of bread (28 g) may be used to represent a serving. The word 'serving' may also be replaced with any other appropriate word describing a common measure or unit including 'metric cup' or 'metric tablespoon'.
